

Yorkshire Poll

Prepared by Survation on behalf of the Yorkshire Devolution Movement

Methodology

Fieldwork Dates

9th – 11th August 2016

Data Collection Method

The survey was conducted via telephone interview using a combination of landline and mobile data. Differential response rates from different demographic groups were taken into account.

Population Sampled

All residents aged 18+ living in Yorkshire

Sample Size

1,003

Data Weighting

Data were weighted to the profile of all adults aged 18+ in Yorkshire. Data were weighted by age, sex, region, and 2015 General Election Vote. Targets for the weighted data were derived from Office for National Statistics Data and the results of the 2015 UK General Election.

Margin of Error

Because only a sample of the full population was interviewed, all results are subject to margin of error, meaning that not all differences are statistically significant.

For example, in a question where 50% (the worst case scenario as far as margin of error is concerned) gave a particular answer, with a sample of 1,003 it is 95% certain that the 'true' value will fall within the range of 3.1% from the sample result.

Question presentation

All data tables are shown in full, in the order and wording put to respondents, including but not limited to all tables relating to published data and all relevant tables preceding them.

Tables for demographic questions might not be included but these should be clear from the cross-breaks on published tables.

In all questions where the responses are a list of names or statements, these will typically have been displayed to respondents in a randomising order.

The only questions which would not have had randomising responses would be those in which there was a natural order to maintain

– e.g. a scale from “strongly favourable” to “strongly unfavourable”, a list of numbers from 0 to 10 or questions which had factual rather than opinion-related answers such as demographic information. “Other”, “Don't know” and “Refused” responses are not randomised.

Not all questions will have necessarily been asked to all respondents – this is because they may be follow-on questions from previous questions or only appropriate to certain demographic groups. Lower response counts should make clear where this has occurred.

Data were analysed and weighted by Survation.
